Monstrack

Monstrack is a system that enabled you to monitor your trucks and heavy equipment remotely.It does not only monitor the position, but also the status of the engine, unit the productivity The system is supported by ORBCOMM Satellite, which is alreay proven in machine to machine communication for more than 550.000 subscribers in the world.
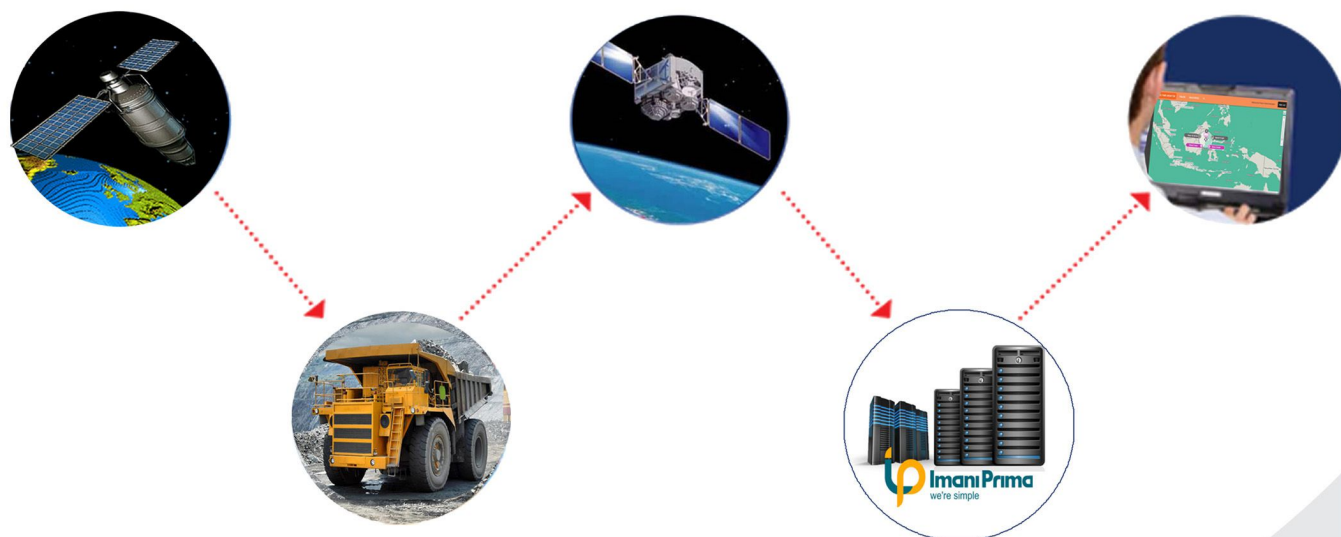

Why Monstrack ?

Facing nowadays situation, information is a key for success. That is why Monstrack created as the solution to provide the information, improving efficiencies , optimizing effectiveness of the vehicle, and also ensure your success.

Combining a variety of sophisticated technology, Monstrack is possible to report:
- Vehicle position, to ensure that the vehicles work on the right place
- Machine status, to ensure that the vehicle is always in excellent condition
- Productivity, to optimize the vehicle's work result
- Alerts, if there is something undesirable.
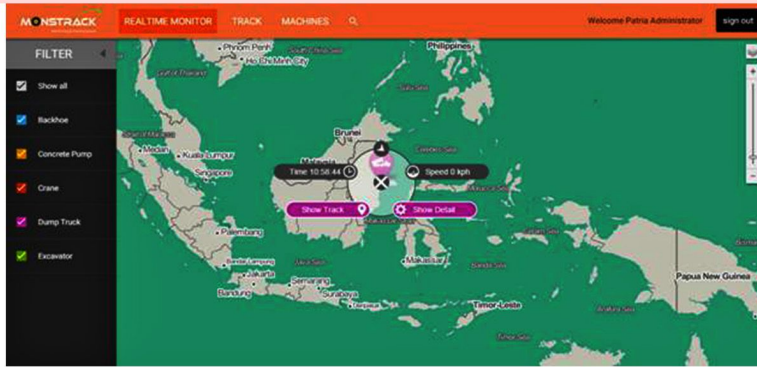

How does Monstrack work?

1. GPS Satellite provide position information to the equipment at the field.

2. The Monstrack controller in your vehicle gathers engine data and position, then send this information trough the GSM Or ORBCOMM Networks

3. a. GSM Network passes the information to Monstrack data center.
   b.ORBCOMM Satellite transmit the information to Monstrack data center.

4. Monstrack Data Center in Jakarta stores and process the data;
   You can access the information gathered from your vehicle directly via internet.
